

HOLY FAITH ACADEMY, Dhuliyan (MSD)
Affiliated to CICSE, New Delhi
SEMESTER-1 EXAMINATION
Session: 2024-2025
STD: IX

Subject: Geography
SOUMYAJIT DAS
Time: 2 Hrs.

General Instructions:

1. Attempt all questions from PART I (COMPULSORY).
2. A total of five questions are to be attempted from PART II.
3. The intended marks for the question or parts of questions are given in brackets ().

PART I

ATTEMPT ALL QUESTIONS (30 Marks)

Question 1: Fill in the blanks.

- i. The landforms on the Earth's surface are created by the _____ forces.
- ii. The intensity of earthquake is measured by _____.
- iii. Mt Vesuvius is the example of a _____ volcano.
- iv. The scientist who study about volcano are called _____.
- v. The path of the Earth around the sun is called _____.

Question 2: Write short note on:

- i. Latitude
- ii. Biosphere
- iii. Volcano
- iv. Earthquake
- v. Weathering

Question 3: Write answers to these questions:

- i. Which part of India is associated with frequent earthquakes?
- ii. Which science deals with earthquake waves?
- iii. What is longitude?
- iv. Give reason why the Earth is considered a unique planet in the solar system.
- v. What are the two layers of core? What is core composed of?
- vi. What is the geographical significance of Equator?
- vii. What is international date line?
- viii. State two effects of revolution.
- ix. Write difference between summer and winter solstice.
- x. Name the four seasons generally experienced on the earth.

PART II**(ATTEMPT ANY FIVE SETS OF QUESTIONS)****Question 4**

- i. What are the recent proof that the earth is sphere in shape?
- ii. How does the presence of circular horizon explain that the Earth is spherical? Explain with the help of diagram.
- iii. Explain with the help of diagram the Bedford level experiment.
- iv. State two significance of the atmosphere.

Question 5

- i. Define geographic grid. State its importance.
- ii. State two characteristics of parallels.
- iii. The distance between two consecutive latitude is always same, but it is not in case of longitudes. Explain why this is so?
- iv. Calculate the time of a place located at 40° E longitude, when it is 10 p.m at 40°W Longitude.

Question 6

- i. Name the following:
 - a) The plane in which the earth revolves around the sun
 - b) A year with 366 days
- ii. On 21st March, days and night are of equal duration at all places on the earth.
- iii. State the effects of rotation.
- iv. What is circle of illumination? What is its significance?

Question 7

- i. Give two important characteristics of crust.
- ii. What is Moho discontinuity?
- iii. State three ways how the knowledge about the Earth's interior has been obtained.
- iv. Identify:
 - a) The rate at which the temperature of the earth increases.
 - b) The metal that explains earth magnetism.
 - c) Another name for core.

Question 8

- i. How are fold mountains formed? Give one example of old fold mountains.
- ii. How are residual mountains formed? State one Indian example.
- iii. Why are plains important to mankind?
- iv. Identify the following:
 - a) Roof of the world
 - b) Wind deposited plain
 - c) Plain formed by the deposition of materials brought down by the rivers.

Question 9

- i. Name the extrusive features of volcanic landform.
- ii. Describe any three constructive effects of volcanic eruption.

- iii. Name any three processes associated with volcanic activity and explain it.
- iv. Describe the main component of volcano with the help of diagram.

Question 10

- i. Which scale is used in USA for measuring the intensity of earthquake.
- ii. Why does the Circum Pacific belt has more frequent earthquake?
- iii. Explain any three constructive effects of earthquake.
- iv. What are the factors on which the intensity of earthquake depends?

Question 11

- i. Difference between chemical and mechanical weathering.
- ii. When can rainwater be an effective agent of weathering?
- iii. Describe the work of different agents of biological weathering.
- iv. Describe the various processes involved in chemical weathering.
